▶ ASSET MANAGEMENT

# Extensive asset management with Jira

BAsset management is about the management of all fixed assets like machines or equipment, infrastructure technology like PCs and monitors, but also of buildings or the vehicle fleet. The proper and legal administration of software licenses from mainframe installations to the mobile application is just as much a part of an asset management solution as the proper planning of procurement, investment, and costs. Originally developed for the inventory of software and hardware components like PCs, monitors, software licenses and cellphones, Jira asset management now covers all requirements of a modern asset management for all of an enterprise's fixed assets. The asset catalogue provides a complete overview of the assets. Location, responsibilities, and the history of each asset like repairs or maintenances, are completely documented. You can look up all incidents in your assets' life cycle at any time and can therefore plan accordingly.
