

## Integrated reporting in Jira and Confluence with eazyBI

An efficient corporate management requires extensive information from all business areas. Financial ratios and sales projections from the sales department alone are not sufficient for ensuring lasting commercial success. Integrated reporting stands for an integral concept that combines the classic reporting system from the financial domain with the reporting system of other business processes. Integrated reporting allows for a holistic overview of KPI's, so that trends can be derived from areas, that have been considered as separate beforehand. Apart from classic cash flow statements, balance sheets or income statements, it also includes reports concerning the risk, asset, service and portfolio management or sustainability analyses to name just a few examples.

Through direct access to Jira and Confluence via eazyBI, a flexible, web-based business intelligence solution, you gain access to the efficient BI functions for the KPI of the business processes displayed by Atlassian. That way, eazyBI can be used for controlling and as an holistic integrated reporting system for your enterprise.

### eazyBI functionality for an integrated reporting in the Atlassian environment

- ▶ drag and drop interface
- ▶ jump right into the data thanks to drill-down
- ▶ wide range of visualizations (Card, Gauge, Gantt and many more)
