

Process automatization with Jira workflow management

The automatization of workflows simplifies and speeds up the conduction of complicated business processes. For instance, if there is a filled-out application form, a user action (an internal signal) is activated or the form is forwarded to the person responsible for the next project stage. From digitally editing the inbox to vacation requests, recruitment, order processing, support services or complaint management to complex processes and projects in software development or production: Almost every business area can be optimized through a systematic workflow management.

Jira's workflow functionality can substantially contribute to improve the efficiency of your enterprise's processes.

Atlassian functionality concerning workflow management

- adjustable workflows to automate your business processes
- shared workflows for task, project, and resource coordination
- dashboards to track tasks (who, what, until when)
- automatic notifications when important status changes are made
- numerous predefined and adjustable reports, statistics, and diagrams
