

Server Migration

Atlassian made the cloud their first priority and stopped their server product on February 22nd. The only alternative to the Atlassian cloud is a data center license, which is best suited for large corporations. At NowConsultians, we want to help you migrate your server instances to the Atlassian cloud. We offer support for the entire Atlassian stack.

Atlassian-Funktionalität im Bereich des Strike Managements

1. Analysis: Together, we will assess whether the cloud is the best solution for your company. What kind of customization does your current instance have, and how can we replicate it in the cloud? Do all the plugins you use have a cloud version, and if not, how can we implement a custom solution tailored to your use case?
2. Planning: We will work together to create a custom migration roadmap that is perfectly suited to your needs.
3. Preparation: Together, we will prepare all data and, if needed, custom solutions for the migration.
4. Test migration: The migration will be made onto our test instance, and all solutions will be tested. This way, we see how long the migration will approximately take and if all plugins and custom scripts work as intended.
5. Migration: The migration is carried out based on the information collected in the test migration and the migration roadmap.
6. Onboarding: Because the UI and the functions are slightly different, we gladly train your users how to navigate the cloud products.
7. Support: If any questions or problems arise, you can reach out to us anytime. We are here to help you.
